Table of contents

1 A holistic approach to business process management 1
1.1 The issue is about improving the business performance of your enterprise 1
1.2 Process-centric approach – processes and services shall be made explicit 2
1.3 Some existing disciplines for continual performance improvement 3
1.4 The essence of the BPM discipline – what you model is what you execute 5
1.5 The flexibility of your BPM system must be explicitly architected 12
1.6 Your flexible BPM system will become an enabler for business innovations 15
2 The architectural framework for improving BPM systems 17
2.1 General 17
2.2 BPM view of the business 17
2.3 BPM view of business – IT collaboration 18
2.4 Architecting flexibility of enterprise BPM systems 19
2.4.1 General 19
2.4.2 All artefacts must be versionable throughout their lifecycle 20
2.4.3 All artefacts must evolve to become digital, externalised and virtual 20
2.4.4 All relationships between artefacts must be modelled explicitly 21
2.4.5 All models must be made to be executable 22
2.5 An ideal process development tool 23
2.6 Multi-layer implementation model 24
2.7 What does it do for me? 25
2.7.1 General 25
2.7.2 Enterprise stakeholders – customers 26
2.7.3 Strategy stakeholders – top managers 26
2.7.4 Strategy stakeholders – enterprise architects 27
2.7.5 Business stakeholders – managers 28
2.7.6 Business stakeholders – line managers or process owners 30
2.7.7 Business stakeholders – super-users 31
2.7.8 Business stakeholders – normal users 31
2.7.9 Project stakeholders – managers 31
2.7.10 Project stakeholders – business analysts 32
2.7.11 IT stakeholders – managers 32
2.7.12 IT stakeholders – solution architects 34
2.7.13 IT stakeholders – developers 35
2.7.14 IT stakeholders – operators 37
3 Organisational preparedness for BPM 39
3.1 General 39
3.2 BPM maturity model from Gartner 39
3.3 Assess your limitations – map out your challenges 41
3.4 The architectural framework implementation patterns 43
4 Recommendations for building BPM systems 47
4.1 General 47
4.2 A few definitions can be useful 48
4.3 Endorse the “building block” architectural concept from TOGAF 48
4.4 Avoid modification of shrink-wrapped commercial or freely available software 49
4.5 Danger of premature optimisation 50
4.6 Avoid the trap of the selection of “top-down” vs. “bottom-up” – use the “pinball” style 51

4.7 Explicit is better than implicit 52
4.8 The big picture 53
4.9 Horizontal and vertical coordination 55
4.10 Long-running processes 55
4.11 Avoid dispersion of the business logic 56
4.12 The importance of business events 58
4.13 Visibility of artefacts 59
4.14 You may break any principle provided that you master it 59
5 Coordination of activities 61
5.1 General 61
5.2 Different coordination techniques 61
5.3 Choice of coordination technique 64
5.4 Combining different coordination techniques 65
5.5 Making coordination explicit 66
5.6 Avoid the “double master” anti-pattern 68
5.7 Improving coordination by evolution, but not revolution 68
5.8 How many process engines are used in your enterprise? 69
6 Example: a request for absence 71
7 Typology of BPM artefacts 73
7.1 General 73
7.2 Events 74
7.3 Roles 75
7.4 Business objects 77
7.4.1 General 77
7.4.2 Data structure objects 78
7.4.3 Documents 78
7.5 Services 80
7.6 Rules 82
7.7 Audit trails 82
7.8 Key performance indicators 83
7.9 Human activities 84
7.10 Processes 88
7.11 Dependencies between BPM artefacts 89
8 Use of BPMN for modelling business processes 91
8.1 A brief presentation of the BPMN standard 91
8.2 Diagramming style in BPMN 95
8.3 Some practical patterns 98
8.3.1 General 98
8.3.2 Pre-processing, Doing and Post-processing – PDP pattern 98
8.3.3 Automatic, Human and Automatic – AHA pattern 98
8.3.4 Double Check – DC pattern 99
8.3.5 Machine & Man – M&M pattern 100
8.3.6 Decoupled Business Logic – DBL pattern 100
8.3.7 Initial Process Skeleton – IPS pattern 101
8.3.8 Error Recovery Loop – ERL pattern 102
8.3.9 Service Level Reinforcement – SLR pattern 102
8.3.10 Structure Your Process – SYP pattern 103
8.3.11 Decide, Execute, Control – DEC pattern 103
8.3.12 Propose, Act, React – PAR pattern 104
8.3.13 Justify and Go – JG pattern 104
8.3.14 Unstructured Becomes Structured – UBS pattern 104
8.3.15 Process Realisation Faked – PRF anti-pattern 105

8.3.16 Process Package – PP pattern....106
9 To model executable processes is to develop implementable processes....107
9.1 General....107
9.2 Modelling procedure overview....108
9.3 Blackboxing phase....109
9.4 Structuring phase....112
9.5 Re-construction phase....114
9.6 Instrumentation phase....115
10 Architecting flexibility of BPM systems....117
10.1 General....117
10.2 Considering adaptability....117
10.3 Versioning of artefacts....119
10.4 Basic unification considerations....120
10.4.1 Naming of URIs....121
10.4.2 Naming of data types and data properties....121
10.4.3 Considerations for XSD design....123
10.4.4 Considerations for WSDL design....124
10.4.5 An example....127
10.4.6 Considerations for other technical artefacts....130
11 Design considerations....131
11.1 Introduction....131
11.2 Testing....131
11.3 Error handling....131
11.4 Events....132
11.5 Roles....133
11.6 Traceability....134
11.7 Business objects....135
11.7.1 General....135
11.7.2 Data structure objects....135
11.7.3 Documents....137
11.8 Services....144
11.9 Process....147
11.9.1 General....147
11.9.2 Service Level Reinforcement – SLR pattern in more detail....147
11.9.3 A Farewell to Batches – F2B pattern....148
11.9.4 Integrity Reached via Idempotency of Services – IRIS pattern....149
11.9.5 Launch Pad – LP pattern....149
11.9.6 Expected Return – ER pattern....150
11.9.7 Collect and Periodically Process – CPP pattern....150
11.9.8 Generate Passive Trace – GPT pattern....151
11.9.9 Light Dispatch of Events – LDE pattern....151
11.9.10 Advanced Voting Solution – AVS pattern....152
11.10 Combination of tools – example 1....153
11.11 Combination of tools – example 2....155
12 The use of BPM for improving IT....159
13 The BPM opportunity and challenge for enterprise architecture....163
13.1 General....163
13.2 The position of EA within an enterprise....163
13.3 Back to basics....164
13.4 From reactive design of solutions to proactive architecting of the enterprise....166
13.5 Towards applied enterprise architecture....168
13.6 Different roles of an enterprise architect....170

13.7 Raise of business architecture 170
14 Terminology 171
14.1 General 171
14.2 Systems-architecture-related terminology 171
14.3 Business-related terminology 174
14.4 Artefacts important for the BPM discipline 176
15 Names used for business objects, services and processes, events and roles 179
15.1 Business objects 179
15.2 Services and processes 180
15.3 Events 181
15.4 Roles 181
16 Index 183
17 Bibliography 185
